

Delegates-Programme

Munich June 2010

10th June

09:00 AM

Visit to MAN Forum - experience the world of commercial vehicles

A unique world of experience and competence has come into existence directly at the headquarters of MAN Nutzfahrzeuge AG – the MAN Forum. The combination of Branch Competence Center, Brand World and Customer Centre conveys an emotional and authentic experience of the brand to customers and visitors alike. The MAN Forum is a place of unexpected encounters, expresses transparency and openness and acts as a platform for communication and interaction. Immerse yourself in the world of MAN Nutzfahrzeuge and experience it for yourself.

14:00 PM

Visit to FZG - Institute for Machine Elements Gear Research Centre (FZG) Technical University of Munich

The Institute for Machine Elements - Gear Research Centre (FZG) - is part of the faculty of Machine Engineering at the Technical University Munich. The research institute was founded by Prof. Dr.-Ing. Gustav Niemann in 1951, who already started directive works in the research areas of gears and transmissions at Braunschweig in 1938. These areas of research remained unchanged by Prof. Dr.-Ing. Hans Winter, who followed Prof. Dr.-Ing. G. Niemann in October 1968.

In October 1989, Prof. Dr.-Ing. Bernd-Robert Höhn was the successor Prof. Dr.-Ing. H. Winter as head of the Institute for Machine Elements at the TU Munich.

Under his direction, the general directions of research have been expanded by further research areas in automotive applications, as there are continuously variable transmissions (CVT) and an autark, parallel hybrid drive train for vehicles.

In the course of the relocation of the whole faculty of Machine Engineering from the inner city of Munich to Garching, the Institute for Machine Elements could move to its new and modern accommodations at the campus of Garching.

At present, there are about 67 employees working at the institute, two third of which are scientific personnel and one third are technical and administrative personnel, working in workshop, testing area, electronic and metallographical laboratories, the bureau of technical design and sekretariat. In addition to that, there are undergraduate students, as well as at an average two foreign scientists, who stay and work as guests for several months. The institute occupies an area of 850 m² for bureaus and rooms for tutorials, 300 m² for measuring rooms and laboratories, 350 m² for workshop and 850 m² for testing area.
