### **EUROTRANS -Specialized training on gear design and engineering on master level**

Mai, 2011 - After the success of the EUROTRANS Gear Training in 2010, EUROTRANS, the European Committee for Power Transmission Engineering, organizes the second edition of this specialized training on gear design and engineering. This English spoken training on master level is given in 4 different European Countries in order to guarantee the best trainers and facilities dedicated to gear design, engineering and manufacturing.

Although the power transmission engineering industry is an important industry branch, dedicated programmes on gears are rare on university level. In Europe, a mechanical engineer gets on average 5 hours of gear training. This is far too less to be effective in industry. Moreover, gear trainers are becoming rare due to retirement and non replacement.

Therefore, EUROTRANS identified the remaining top gear trainers and developed an extensive modular Gear Training covering all aspects from geometry and design over production to quality control and failure analysis. Addressing a European audience, this residential training is organized in several locations in close connection with famous gear laboratories.

- Week 1: **Geometry and design** with FVA (Munich, Germany), **6 – 10 June 2011**
- Week 2: **Production** with Gleason (Leuven, Belgium), **12 - 16 September 2011**
- Week 3: **Quality and failure** with Design Unit (Newcastle, UK), **10 – 14 October 2011**
- Week 4: **Advanced Gear Design** (To be decided)

Please find the detailed programme for each week and the subscription form on the EUROTANS website. The early bird deadline for week 1 is extended to May 13<sup>th</sup>.

Please register soon, still some places available.
