Frankfurt, 19 September 2011

EUROTRANS – Specialized training on gear design and engineering halfway and successful so far

September, 2011 - After the success of the EUROTRANS Gear Training in 2010, EUROTRANS, the European Committee for Power Transmission Engineering, organized the second edition of this specialized training on gear design and engineering in 2011. The first two training sessions are just completed successfully with 16 participants for week 1 and 13 participants for week 2. Weeks 3 and 4 of the training are still open and will take place in October and December.

Although the power transmission engineering industry is an important industry branch, dedicated programmes on gears are rare on university level. Therefore, EUROTRANS developed an extensive modular Gear Training in collaboration with some top gear trainers covering all aspects from geometry and design over production to quality control and failure analysis. Addressing a European audience, this residential training is organized in several locations in close connection with famous gear laboratories.

- Week 1: **Geometry and design** with FVA (Munich, Germany), 6 – 10 June 2011
- Week 2: **Production** with Gleason (Leuven, Belgium), 12 - 16 September 2011
- Week 3: **Quality and failure** with Design Unit (Newcastle, UK), **10 – 14 October 2011** – registrations are still open
- Week 4: **Advanced Gear Design** (To be decided) – registrations are still open

Please find the detailed programme for each week and the subscription form on the EUROTANS website. The early bird deadline for week 3 is extended to September 23rd.

Please register soon, still some places available for week 3.
